Safety Tips

A safe work environment is vital for any successful piping system installation.
Follow these essential safety guidelines when using Weld-On solvent cements and primers.

In case of any emergencies, read and become familiar with the Safety Data Sheets (SDS) for the Weld-On products you use.

Always wear proper protective equipment, such as NIOSH approved respirators, when solvent welding in enclosed areas or any area with inadequate ventilation.

Solvents in primer & cement evaporate very slowly, especially in poorly ventilated environments. Solvent vapors can linger in a closed piping system until flushed out. If exposed to ignition sources such as flame or sparks, these vapors can dangerously explode.
