

THE WORLD'S MOST TRUSTED BOND

Why Solvent Cement Training is Good for Your Business

CONTRACTOR CHALLENGES

When managing any large-scale irrigation, industrial or pool and spa project, a project manager or contractor is accountable for a countless number of responsibilities. They oversee client expectations, resolve problems, accommodate government agency's requirements, and monitor budgets, to name a few.

The solvent cement that bonds PVC and CPVC pipe, delivers water to people and crops, moves chemicals within factories, and bonds fire sprinkler systems is a small variable in an otherwise massive project. However, if an installer isn't trained correctly when welding pipes, the consequences can be disastrous. Without proper training, contractors can jeopardize loss of time, revenue, and, most importantly, loss of reputation.

COMMITMENT THROUGH TRAINING

Weld-On has proven its commitment to its customers with three dedicated full-time trainers who have trained over 30,000 contractors over the past 70 years for free.

Weld-On is committed to the success of its customers by absorbing the cost of having

professional trainers travel to customers' locations to train technicians and installers in person.

WHY TRAINING IS GOOD FOR YOUR BUSINESS:

- ▶ Improve results with free onsite, in-person training for your technicians/installers.
- ▶ Prevent leaks caused by installer errors to save money and time and to protect your reputation.
- ▶ Win more bids with an ASME B31.3 bonder qualification.
- ▶ Enhance your business with installers trained with the ASTM D2855 standard.

WHY CONTRACTORS CHOOSE WELD-ON

Weld-On is the world's most trusted bond for demanding industries that understand that quality cannot be compromised. For 70+ years, Weld-On has been the global leader in solvent cement technology, unmatched not only in research, development, and innovation but also in support and training.

A GLOBAL PRESENCE

Weld-On products have been used in large-scale projects worldwide, including industrial installations like parks and aquariums, countless miles of PVC pipe for golf courses, agricultural projects, and pool and spa projects. Weld-On makes quality products for every environment, including products that dry quickly in wet conditions or have thick viscosity to accommodate hotter job sites. For decades, Weld-On has been proven to be the most reliable bond contractors can depend on throughout the world.

Weld-On training and support staff are available to answer any questions about products or solvent welding techniques. To talk to a real person, call our technical hotline at 1-877-477-8327, email us at training@weldon.com or connect at www.weldon.com/technical-training, to schedule a training session for your team.
