

WELD-ON S3, 2810 AND CLEANER: NEW BRAND, SAME SABA FORMULA

Weld-On, the global leader in solvent cement solutions is re-branding SABA PVC solvent cement products to Weld-On starting in October 2025.

- ✓ **SABA S3 will become Weld-On S3**
- ✓ **SABA PVC 2810 will become Weld-On 2810**
- ✓ **SABAClean will become Weld-On PCV & ABS Cleaner**

If you have relied on these products for years, rest assured nothing inside the can has changed. All three products retain their original formulas, certifications, performance characteristics, and trusted results.

Why the Change?

Weld-On has acquired the PVC product line and manufacturing facility from SABA, but not the SABA brand. As a result, Weld-On will support customers during the transition by introducing updated product labels that feature the Weld-On logo, while maintaining a color scheme and layout similar to the former SABA design.

This approach helps introduce customers to the Weld-On name while preserving the familiar look and naming conventions they recognize and trust. Most importantly, customers will continue to receive the same trusted PVC formulations, now backed by Weld-On’s 70 years of expertise in high-performance bonding technologies.

Trusted Globally, Now Made Locally

Weld-On brings over 70 years of formulation expertise and a strong legacy of reliability. With the European expansion, that same technology and dependability is now available with faster lead times, reduced shipping emissions, and stronger local support for European markets.

If you’re a long-time SABA user of SABA-branded PVC products, you can feel confident that Weld-On has preserved your expected performance while enhancing access and service through its global footprint.
